**On 7th April, specialists from Headquarters in Szczecin finished testing of Danish command and control system "Daccis", proposed by Maersk Data Defense from Copenhagen.**

MNC NE is about to choose one from three command and control systems offered by Denmark, Germany and Poland. On the 7th of April specialists from Headquarters in Szczecin finished testing of Danish command and control system "Daccis", proposed by Maersk Data Defense from Copenhagen.

Danish command and control system provides monitoring of the battlefield situation and supports the command of the complete command cycle, including the position setting, planning, tasking and control. The tests of the last one command and control systems from Germany are scheduled to take place in May. The final decision of which system the MNC NE will use is expected to be taken in August.
